SKILLS

Software Skills

Programming Languages (Python, C++, JavaScript)

AI/ML (LangChain, Hugging Face, RAG Pipelines, ONNX, Scikit-learn)

Backend (FastAPI, Flask, REST APIs)
Vector & Search (Vespa, FAISS, Semantic Search)

DevOps & Tools (Docker, Git, Linux, CI/CD)

Databases (PostgreSQL, MongoDB, Vector Databases)

Interpersonal Skills

Analytical Thinking

Problem Solving

Team Collaboration

Communication

LANGUAGES

English

Hindi

Marathi

Japanese

HOBBIES

Team Sports

Reading

Exploring Languages

SUMMARY

MCA student with hands-on experience in AI systems, backend engineering, and semantic search, gained through a production internship at QiLegal (63 Moons Technologies). Built and deployed a client-side Vision-Language Model, contributed to production RAG pipelines, and integrated enterprise-scale document processing systems. Proficient in Python and JavaScript with experience in vector databases, WebAssembly, and large legacy codebases. Seeking a software engineering role to build scalable, intelligent AI-driven systems.

EXPERIENCE

Software Engineering Intern — QiLegal by 63 Moons Technologies Limited, Mumbai
January 2026 — April 2026 (3 Months)

- Built a fully client-side Vision-Language Model (VLM) system using Qwen 3.5 (0.8B/2B), enabling OCR and multimodal reasoning directly in the browser via ONNX Runtime and WebAssembly — eliminating all backend inference dependency. Optimized performance through Q4 quantization, balancing model size, latency, and accuracy under browser memory constraints.
- Integrated the Unstructured API into the QiLegal enterprise backend to support end-to-end document ingestion and preprocessing pipelines (PDF, DOCX, emails). Designed granular logging systems across the codebase to improve observability, debugging, and production reliability.
- Worked with Vespa vector database for semantic search and retrieval in QiSearch — querying indexed legal datasets, analyzing centroid-based clustering, and supporting approximate nearest-neighbor retrieval for case similarity and legal judgment search.
- Developed a production-grade web scraping system for legal data extraction, featuring multi-page crawling, dynamic content handling, structured data parsing, retry/failure mechanisms, and clean data pipelines for downstream AI indexing and RAG ingestion.
- Contributed to a production-level RAG (Retrieval-Augmented Generation) pipeline integrating document processing, embedding generation, Vespa vector storage, and LLM-based response synthesis for intelligent legal query handling across QiLegal's platform.

EDUCATION

Aditya Institute of Management Studies & Research (University of Mumbai), Mumbai, India

Master of Computer Applications (MCA)

September 2024 — Ongoing (Expected 2026)

- Coursework: Distributed Systems & Cloud Computing, Ethical Hacking, AI & ML, Advanced Java, Data Structures, Research Methodology, Advanced Web Technologies, DevOps, UI Lab, Networking with Linux.
- Maintained a strong CGPA and developed robust, hands-on projects in these fields, demonstrating solid understanding of both theoretical and applied computer science.

Indira College of Commerce & Science (University of Pune), Pune, India

Bachelor of Business Administration in Computer Applications (BBA(CA))

Oct 2021 — April 2024

- Coursework: Database Systems, Java, R, Android Studio, C++, Software Testing, Statistics, Management, Accounting, Marketing.
- Graduated with strong academic performance (High GPA).

CERTIFICATES & PROJECTS

CERTIFICATES

- **Data Analytics with Python** – *NPTEL (IIT Roorkee)*
- **Programming in Java –** *NPTEL (IIT Kharagpur)*
- **DevOps Mastery** – *Coursera (KodeKloud)*
- **Spring Framework** – *Coursera (LearnQuest)*

PROJECTS

- **NetGuard – Firewall & Intrusion-Detection-System**

Real-time network security monitoring dashboard with intrusion detection, firewall management, and live threat visualization using Flask + Socket.IO

- **Ghost NET - Mini VPN**

Python-based mini-VPN showcasing AES-256 encryption, IP masking, and core VPN functionality via CLI and web interfaces

- **Zen Chat Bot – AI Mental Health Assistant**

AI-powered chat assistant that analyzes user emotions from text and provides supportive, empathetic responses

- **FOCUS-FLOW – AI Focus Wellness Assistant**

React web app that boosts student focus by analyzing webcam input and giving gentle productivity nudges

- **AI Detective Mystery Game**

Real-time multiplayer detective game with AI-generated mysteries, built using React, Express.js, and OpenAI

- **Show Time Hub -Ticket Booking System**

Responsive seat-booking interface with real-time updates and a modern, user-friendly design

- **NLP Query Engine – LLM-Powered Data Query System**

AI-powered query engine that converts natural language into executable SQL queries with schema-aware generation, real-time database interaction, and intelligent query validation using NLP/LLM techniques
